Kevan Maxwell Davis

Staff Product Engineer | Applied AI, Agent Workflows & Developer Platforms

Denver, Colorado, USA | i.am.kevan.davis@gmail.com | 817-791-3542 | linkedin.com/in/kevanmdavis

PROFESSIONAL SUMMARY

Staff Software Engineer focused on agent-native product engineering, applied AI, and developer platforms. Combines deep React and TypeScript experience with agent orchestration, model evaluation, and extensible interfaces. Shapes ambiguous problems through hands-on prototyping and cross-functional product engineering, with a particular interest in making AI agents useful collaborators in real software-development workflows.

TECHNICAL SKILLS

Applied AI & agents: Vercel AI SDK, Pi (RPC/extensions), MCP, OpenAI, Anthropic, Gemini, agent orchestration, model routing and fallbacks, evaluation workflows, human-in-the-loop review

Product engineering: TypeScript, JavaScript, React, Remix, CSS Modules, frontend architecture, reusable APIs and libraries, developer experience, asynchronous workflows

Backend & infrastructure: Node.js, PostgreSQL, MySQL, Prisma, Ruby on Rails, Docker, Kubernetes

PROFESSIONAL EXPERIENCE

Shopify | Staff Software Engineer | 2021–November 2026

- Re-architected **Shopp-E**, an existing internal multimodal AI product, into an isomorphic TypeScript library on **Vercel AI SDK** shared across a React web interface, CLI, and MCP tools. Unified model capabilities, costs, asynchronous jobs, provider fallbacks, and long-running media generation. It generated **100,000+ images**, with daily generation frequently exceeding **1,000** and sometimes **2,000**.
- Built a working **multi-agent code-review workflow** using lightweight change classification to route pull requests to specialist reviewers, then synthesized findings into guided PR tours and diagrams. Piloted with a small group of engineers, exploring how agents can support developers beyond commenting on diffs.
- Designed an **AI-assisted Liquid template migration** prototype using structured edits, iterative parse/render validation, vision-model comparison, and human review. On a small curated benchmark covering five representative template types from 17 templates and five merchant configurations, it achieved **about 90% success**. Served as technical lead for **six engineers** during production development; the project was canceled before launch and never shipped or migrated customers.
- Built **Pi coding-agent extensions** for fast multi-model safety judgments with human override, web-to-Markdown retrieval, rich editing and attachment previews; collaborated on **Pi IDE** interfaces for agent-driven prompts, dialogs, notifications, and extensible panes.
- Extended Shopify's UI extension architecture into the **Admin product-details page**, shipping the initial Bundles extension card and contributing collaboratively to merchant-facing Admin and checkout flows. Mentored junior engineers and an intern.
- Built field-coverage calculations and rule-inheritance visualizations that made complex channel-specific product mappings understandable to merchants; prototyped bulk-editing improvements for a product shipped in 2026.

PROFESSIONAL EXPERIENCE (CONTINUED)

Shopify | Senior Software Engineer | May 2019–2021

- Co-designed the developer-facing API and React extension model for **Checkout UI Extensions**, collaborating with a Principal Engineer on sandboxed remote-UI integration. Core concepts influenced Shopify's eventual production extension platform.
- Contributed to native B2B features, including business customers and payment terms, following the Handshake acquisition.
- Worked on post-checkout upsell experiences and was named co-inventor on U.S. Patent 11,403,658, granted in 2022.

Handshake (acquired by Shopify) | Senior Software Developer / Engineer | October 2014–May 2019

- Built wholesale ordering, catalog, and storefront experiences at a small B2B commerce startup; helped move its frontend architecture from jQuery/Mustache toward **React**, working across product boundaries.

Gilt Groupe | Web Developer → Senior Web Developer | April 2009–August 2014

- Developed shared JavaScript libraries, asset/build infrastructure, cart and checkout flows, and responsive web experiences for a major ecommerce platform; mentored other engineers.

EARLIER EXPERIENCE

Web Developer, Mindspark Interactive Networks (2008–2009); Developer, Tyler Technologies (2006–2008); Research Assistant, University of Texas at Arlington AI Lab (through 2006).

EDUCATION

University of Texas at Arlington | Bachelor of Science, Computer Science
